

## FOUNDATION NOTICE

Cartesi is an application-specific rollups protocol with a VM that runs Linux distributions. The Cartesi technology continues to evolve through the efforts of a decentralized ecosystem of contributors.

The Cartesi Foundation is an active member of that ecosystem that provides funding, publicity, and support to the following activities, among others:

- supporting the development and implementation of the Cartesi technology, upgrades, and features
- supporting the development of decentralized applications to run on the Cartesi technology
- creating written, video, and other educational content for publication through a variety of media and social media platforms
- being an advocate for the Cartesi technology and overall resource to the community in a variety of other ways

The Cartesi Foundation is a non-profit organization, but some of its activities or investments may generate revenue. Any revenue or investment returns generated by the Foundation are reinvested in the community and used to fund the activities of grantees, service providers, and other contributors to the Cartesi ecosystem.

The above-described technology, upgrades, features, applications, content, and other activities of the Cartesi Foundation are referred to in this Notice as “Cartesi Software, Content, and Activities.”

Unless otherwise specified, the Cartesi Foundation makes no representation, warranty, guaranty, or undertaking in respect of any Cartesi Software, Content, and Activities, whether express or implied, including but not limited to the warranties of compliance, accuracy, reliability, validity, merchantability, fitness for a particular purpose, quality, availability, durability, and noninfringement, or as to any of it being uninterrupted, error free, free of harmful components, or secure. Neither the Cartesi Foundation nor its grantees, service providers, or other contributors is liable for or in connection with any actions, proceedings, claims, damages, expenses or other liabilities, whether in an action of contract, tort or otherwise, arising from, related to or in connection with the Cartesi

Software, Content, and Activities or the use or dealings in or with any of them or reliance thereon.

Setting the legal jargon aside, we want everyone to understand the following:

- **Cartesi is a decentralized technology that neither the Foundation, nor any other single entity or actor, has the power to control.** The Cartesi technology is fully open source. The Foundation has no greater control over the technology than any other contributor or participant in the ecosystem. Anyone can use it. Anyone can propose new features or upgrades. The Cartesi technology for everyone, governed by a decentralized community of stakeholders, including core infrastructure builders, token holders, stakers, DApp developers, DApp users, and other ecosystem contributors and participants.
- **When you use the Cartesi technology, or any applications running on the Cartesi technology, you do so at your own risk.** The Foundation is not responsible for, and makes no representations or warranties regarding, the Cartesi technology, its functioning, or any software running on it or associated with it.
- **The Cartesi technology is permissionless, meaning anyone who wants to build an application to run on Cartesi may do so, without authorization from the Foundation or anyone else.** Neither the Foundation nor its grantees or service providers are responsible for the functioning of any applications that run on Cartesi. Be careful and always do your own due diligence before engaging with any DApps that run on Cartesi, regardless of who built or implemented them. Never assume that something will function how you expect it to without verifying it first.
- **We want to be clear: no one censors who may use or build on Cartesi.** Any goals, visions, missions, beliefs, statements, or representations made by or associated with DApps or DApp developers integrating with Cartesi do not reflect those of the Cartesi Foundation.
- **You are responsible for the private keys to any wallet you use to hold CTSI or any other coins or tokens, or to otherwise interact with Cartesi or any DApps running on it.** Do not share your private keys with anyone. And don't lose them! Once lost, there is nothing that can be done to recover access to your blockchain wallet.
- The Cartesi Foundation complies with applicable laws, rules, and contractual obligations with respect to the Cartesi Software, Content, and Activities. However, that landscape is in constant flux and differs from jurisdiction to jurisdiction. **It is your responsibility to conduct your own inquiry to ensure that your activity as it**

**relates to the Cartesi technology complies with all applicable laws, rules, and contractual obligations.**

- Anytime the Foundation links to, quotes, or otherwise references a third party or reproduces or incorporates their information, content, or material, it is solely for informational purposes, and the Foundation has not necessarily verified its accuracy.
- **When the Foundation talks about ideas for the future of the Cartesi technology, it is expressing its vision and hope that those ideas may one day become an eventuality, without any guarantee or commitment any of it will be implemented, or that it will work.** The world of blockchain technology is new and fast-evolving. The Cartesi technology is, and will continue to be, a first of its kind. There is no technological precedent to follow. **Any aspirations or visions for the future of the Cartesi technology are just those, and may change as a result of further research, development, and an evolving technological landscape.**
